

How it Works

01

Design

During the design phase, we manage design narratives, conduct drawing reviews, oversee standards reviews, and coordinate and create shop drawings.

02

Construction

During the construction phase, we oversee structured cabling, manage ISP contracts, provide high-speed internet access, implement security measures, and assist with EV charging selection.

03

Install

During the installation phase, we handle IT Network closet builds, ensure certifications are obtained, set up PBX systems, install surveillance equipment, and integrate audio/video components.

04

Go Live

During the go-live phase, we facilitate integration and interface with property management systems (PMS), conduct training sessions, and provide comprehensive documentation to ensure smooth transition to operations.

05

Operations

In operations, we offer managed IT solutions, provide remote support, ensure 24/7 assistance, and oversee technology refresh initiatives to keep your systems up-to-date and running smoothly.
